SkyRegs Launches New Web-Based Service to Navigate the Complexities of Aviation Regulations with Certainty

A single-source for aviation regulation and guidance, SkyRegs instantly puts the universe of regulatory information at your fingertips.

McLean, VA and Oshkosh, WI (July 22, 2019) – SkyRegs (www.SkyRegs.com), a web-based service that provides a single-source of aviation safety regulations and guidance for the aviation community, was launched today at the EAA AirVenture Air Show. Updated daily, the SkyRegs online service provides instant access to over 10 million pages of the latest aviation regulations and guidance.

"We are thrilled to launch SkyRegs today and deliver this one-of-a-kind information search service to the aviation community. The aviation community knows how time consuming it is to keep up with ever-changing regulations, housed in multiple locations. We identified a need in the market that we knew we could fill with our team of pilots, aviation regulatory subject matter experts, and software application developers. The feedback so far has been incredible, and we look forward to introducing the world to SkyRegs," said Kevin McGreevy, EVP Business Development.

SkyRegs was developed to give context and relationship to the myriad of aviation safety documents and underlying regulations used by those in commercial aviation, general aviation, UAV operations, and aviation education. SkyRegs puts the full-spectrum of aviation safety regulations and guidance at users' fingertips – research that once took hours now takes only seconds.

"Working with our team to develop SkyRegs has been personal for me. As an EASA commercially qualified pilot, obtaining my FAA ATP, MEI and CFII in three months was a challenge," said Rich King, SkyRegs' aviation subject matter expert and Director of Aviation Software. "A significant part of that challenge was getting a handle on all the many sources of regulation information and documents. Now with SkyRegs, the aviation community has all U.S. compliance information in one source, updated nightly, and it is fast to search and browse. Amazing!"

For a limited time, SkyRegs is offering members of the aviation community a free 30-day trial of the service (www.SkyRegs.com). Plus, visitors to the EAA AirVenture Air Show in Oshkosh, Wisconsin can visit the SkyRegs team from July 22 – July 28, 2019 in EAA Exhibit Hangar D, booth 4106, and take SkyRegs for a test flight.

Visit SkyRegs.com today to explore the features and benefits of SkyRegs, including:
- SkyRegs' one-stop Search feature enables users to access more than 10 million pages of U.S. aviation regulations, updated nightly. Type in a topic, keywords or acronym and SkyRegs returns a list of documents, organized by relevance. For every result, view information about the

document. Click on its name to view the full-text source document. Visualize results with the Relationship Map to see the universe of relevant documents and how they are connected.

- SkyRegs' Browse feature enables users to look through aviation regulations and rules contained within the Code of Federal Regulations sections, or expedite a search and pinpoint keywords or acronyms within a specific document-type library.
- SkyRegs' Certification Basis tool enables users to identify all of the regulatory changes that took place between points in time, or between Amendment levels, to understand actions that are needed to bring an aircraft or component into compliance.

About SkyRegs

SkyRegs was developed by and is operated by Network Designs, Inc. (NDi, www.netdes.com), a Service-Disabled Veteran-Owned Small Business (SDVOSB) that specializes in designing, developing, and delivering resilient network and business solutions for the modern enterprise. NDi has served federal agencies and commercial customers for over 23 years, including the Federal Aviation Administration. The SkyRegs team includes pilots, aviation regulatory subject matter experts, and application developers.
